

JEYASRIRAM E

ABOUT ME

Enthusiastic Electronics and Communication Engineering (ECE) student with a solid foundation in Java Full Stack Development. Proficient in Java, Spring Boot, HTML, CSS, JavaScript, and SQL to build scalable and user-friendly web applications. Strong analytical and problem-solving skills with the ability to work effectively in team environments. Passionate about learning emerging technologies and improving software development skills. Looking for an opportunity to begin a professional career as a Full Stack Developer and contribute to organizational growth.

EDUCATION

M Kumarasamy College of Engineering, Karur B.E in Electronics and Communication Engineering | CGPA: 7.0 (4th sem) August 2023 - May 2027

CEOAIL.HR.secondary school, Madurai
6.9%

SKILLS

Technical skill

- C programming
- JAVA programming
- Data structures

Soft skill

- Problem-Solving & Critical Thinking
- Adaptability & Quick Learning
- Effective Communication

LANGUAGE

- Tamil
- English

PROJECT DETAILS

CHARITY DONATION MANAGEMENT SYSTEM

- Title: Charity Donation Management System
- Role: System Developer / Database Assistant
- Description: Designed and developed a charity donation management system to efficiently manage donor information, donation records, and fund distribution activities. Integrated a user-friendly interface with database management modules to track donations and maintain transparency. The system helps organizations monitor donations, generate reports, and ensure proper allocation of funds for social welfare activities.

A PORTABLE, NON-INVASIVE ELECTROMAGNETIC SENSING SYSTEM TO DETECT ABNORMAL BRAIN FLUID ACCUMULATION

Patent Published

- Title: Portable Brain Fluid Monitoring and Detection System
- Role: Research Assistant
- Description: Designed a portable non-invasive electromagnetic sensing system to detect abnormal brain fluid accumulation using a Leaky Wave Antenna. Integrated microwave signal generation and RF sensing modules in a helmet-based setup to transmit and receive signals through brain tissues. Analyzed attenuation and dielectric property variations to differentiate normal and abnormal brain conditions for early-stage healthcare screening.

A HIGH-SPEED TRUNCATED WT MULTIPLIER USING 2:1 MUX BASED APPROXIMATE COMPRESSOR FOR IMAGE SHARPENING

- Title: Truncated WT Multiplier Using 2:1 MUX Based Approximate Compressor for Image Sharpening
- Role: Digital Design and Verification Assistant
- Description: Designed and developed a high-speed truncated WT multiplier using a 2:1 MUX based approximate compressor to improve processing performance and reduce hardware complexity. Integrated approximate computing techniques to minimize power consumption and optimize area utilization while maintaining acceptable accuracy. Applied the proposed design for image sharpening applications to enhance image quality and edge detection for efficient real-time image processing.

DAILY TASK SCHEDULER

- Title: Daily Task Scheduler
- Role: System Developer / Database Assistant
- Description: Designed and developed a daily task scheduler system to efficiently organize and manage daily activities and schedules. Integrated a user-friendly interface with task management modules to create, update, and track tasks based on priority and deadlines. The system helps users improve productivity, manage time effectively, and monitor task completion status in an organized manner.

CERTIFICATES

- Internship in IOT Platform
- cloud computing
- Artificial Intelligence – Concepts & Techniques
- Network Security

INTERNSHIP

- Title: Full Stack Web Application Development
- Description: Developed responsive and user-friendly web applications using front-end and back-end technologies. Designed interactive user interfaces, managed databases, and implemented server-side functionality to ensure smooth application performance. Gained hands-on experience in building complete web solutions with efficient data handling, authentication, and system integration.
- Title: VLSI Design and Verification Intern
- Description: Completed hands-on training in VLSI Design and Verification, gaining knowledge of RTL design, functional verification, simulation, and the VLSI design flow. Worked with industry-standard tools to analyze and verify digital circuits while strengthening hardware design and debugging skills.
